ADD-ONS FOR QUICKBOOKS · SRI LANKA

QuickBooks Add-ons

QuickBooks does the books. These do everything else.

Five modules that close the gap between QuickBooks - Online or Desktop - and the way Sri Lankan businesses actually invoice, control credit, move stock across locations, and print documents the IRD expects.

5 add-ons	QBO + Desktop	IRD ready	From USD 7
IRD invoicing to printing	Works with both editions	Compliant invoice printing	Depending on modules chosen

The Five Add-ons

1 Sales Basic - Foundation module

Prints invoices exactly as IRD regulations require, fully integrated with QuickBooks Online or Desktop. IRD-compliant invoice layout and numbering, with direct sync to your QuickBooks sales data. No duplicate entry, no manual reformatting.

2 Sales Advance - Includes Sales Basic

Everything in Sales Basic plus the full pre-invoice sales cycle with approvals built in: quotations and sales orders, credit notes, and approval steps before documents proceed.

3 Credit Control - Includes Sales Advance

Control how much credit a customer can carry and what happens when they exceed it: customer credit limit enforcement, overdue invoice monitoring, and automatic invoicing blocks when criteria are breached.

4 Multi-Location - Sales Advance + Stock

Makes QuickBooks inventory-aware across every branch: purchase workflow across locations, stock transfer between branches, and location-wise inventory visibility with multi-warehouse stock reports.

5 Printing - Standalone, any tier

Brings cheques, vouchers and receipts up to local printing requirements straight out of QuickBooks, with cheque printing to bank-specific layouts.

6 How they stack

01 Sales Basic to 02 Sales Advance to 03 Credit Control. For branches: Sales Advance plus purchase and stock transfer becomes 04 Multi-Location. 05 Printing runs independently.

7 Works with any plan

Add-ons layer on top of whichever QuickBooks Online plan fits your business. You do not need the top tier to get IRD-compliant invoicing or credit control.

8 Fully integrated

Transactions sync directly with your QuickBooks data - no duplicate data entry between systems.

ERP-grade controls, built into every add-on

9 Multi-level approvals
Route quotations, orders and credit notes through as many approval steps as your business requires.

10 User-level edit & delete rights
Decide exactly who can edit or delete a transaction, down to the individual user, not just by role.

11 Void with full audit trail
Nothing disappears. Voided transactions stay traceable: who voided it, when, and why.

12 Discount & numbering control
Maximum discount per user or role, and sequential gap-free document numbering for audit and IRD.

ONE SYSTEM, END TO END

Built for Sri Lankan business requirements

IRD Invoicing
Tax invoices printed to Inland Revenue requirements with VAT and SSCL

Credit Discipline
Limits, overdue monitoring and automatic blocks applied consistently

Branch Operations
Purchasing, stock transfer and location-wise inventory visibility

Typical reasons businesses add these

- QuickBooks invoices do not meet IRD tax invoice format requirements
- Sales documents need approval before they are issued to customers
- Customers exceed credit limits or run overdue without invoicing being stopped
- Stock moves between branches or warehouses and needs location-wise visibility
- Cheques and vouchers must print to Sri Lankan bank layouts

Request a Demo

Pricing depends on the modules you choose and user count, starting from USD 7. Tell us how your business invoices, transfers stock and manages credit, and we [illegible]d-ons.
